PROFESSIONAL SUMMARY

Data Analyst with business intelligence and data governance experience across Power BI, SQL, Python, and Tableau, translating enterprise data into strategic, executive-ready reporting and KPI frameworks. Delivered measurable outcomes for cross-functional stakeholders cutting executive report prep time 60%, reducing dashboard query load 30%, and saving 15 hours weekly through Python-automated data ingestion. Applies data governance and star-schema data modeling across Microsoft Fabric. MS in Information Management, University of Illinois Urbana-Champaign, GPA 4.0.

CORE SKILLS

Languages & Query Tools: SQL, Python, DAX, Power Query (M), PySpark

BI & Data Visualization: Power BI, Tableau

Data Engineering & Cloud Platforms: Microsoft Fabric, Azure (Data Factory, ADLS, IAM), AWS (S3, Glue, Redshift), Snowflake, dbt, Databricks

Data Modeling & Governance: Star Schema Modeling, Semantic Modeling, Row-Level Security (RLS)

Business Process & Collaboration: Jira, Confluence, Agile/Scrum, PowerApps, Salesforce, Excel, Alteryx

WORK EXPERIENCE

Data Analyst, TopBuild, Daytona Beach, USA

May 2025 - May 2026

- Enabled demand forecasting and capacity planning for FP&A by building a **Microsoft Fabric** data pipeline (API ingestion, data cleaning, semantic modeling, **6 Power BI** reports) on Census Bureau housing data replacing **8 hours** of weekly manual Excel work.
- Improved supply chain visibility by delivering Inventory Turnover and Days of Supply dashboards, using **Microsoft Copilot** optimized **DAX** to cut refresh times from **130s** to **40s** and reduce visual query load by **30%**.
- Cut executive report prep time **60%** by delivering a 7-page IT scorecard covering **15 KPIs** owning requirements gathering, data cleaning (**Power Query/M**), star-schema data modeling, and **DAX** measure development for leadership and analysts.
- Strengthened data governance by deploying **Row-Level Security (RLS)** and a role matrix, ensuring accurate access permissions for 100% of users.
- Partnered with cross-functional stakeholders to define **KPIs**, translate business requirements into technical specifications, and deliver BI solutions via Agile managing requirements in **Jira** through testing and sign-off.

Technical Consultant, Business Intelligence Group, Champaign, USA

Jan 2025 - May 2025

- Drove end-to-end development of an analytics product with the founding team gathering requirements, defining **KPIs**, and building scalable data visualizations using **SQL**, **Python**, and **Tableau Desktop**.
- Enabled KPI-driven decision-making for executive leadership by developing a CXO-facing **Tableau** dashboard with near-real-time KPI visibility and gap-to-target scenario analysis across business verticals.
- Improved conversion rate **19 points** and reduced churn **12 points** by designing and implementing A/B experiments and building business cases for product process improvements.
- Performed **User Acceptance Testing (UAT)** with the **QA** team to ensure project functionality and created **Jira** bug tickets upon defect detection, improving system performance accuracy.
- Contributed to a **10%** lift in product pilot conversions by producing 10 client-facing analyses and summaries for executive meetings.

Business Intelligence Analyst, Webomatic Softech Private Limited, Mumbai, India

May 2022 - Jan 2023

- Drove a **5%** lift in targeted product sales by processing **20M** retail records from **AWS S3** into a star-schema data model and **5 Power BI** dashboards that identified underperforming **SKUs** and revenue opportunities.
- Improved data accuracy **10%** and reduced pricing discrepancies across sales channels by cleaning and validating product and pricing data in SAP S/4HANA ERP.
- Saved 15 hours weekly by ingesting **1M+** rows via **API** calls and **Python** scripts, eliminating manual data collection.
- Ensured data governance standards by reconciling logistics records and performing data validation using **SQL** and **Excel** (SUMIFS, COUNTIFS, LOOKUPS).
- Conducted requirements-gathering sessions to define business needs and **KPI** definitions, covering dashboard development and documentation of requirements and workflows in **Confluence**.

PROJECTS

Netflix MovieLens ELT Pipeline Using dbt & Snowflake | Tech - *SQL, Python, S3, dbt, Snowflake, Git* | [Github](#)

- Built a production style dbt project on Snowflake modeling the MovieLens dataset across a 4-layer ELT architecture (Raw, Staging, Dim/Fact, Mart) implementing 13 models with mixed materializations (views, tables, incremental, ephemeral), schema tests for referential integrity and not null constraints, and an analysis layer demonstrating end to end dbt Core proficiency on Snowflake.

Transportation & Logistics Analysis | Tech - *Python, Pandas, Numpy, PowerBI* | [Github](#)

- Analyzed **4K** shipment bookings across **184** suppliers using **Python** for data cleaning and feature engineering and built a **3 Power BI** dashboard tracking delivery performance, supplier compliance, and delay root causes identifying that **61.4%** of shipments were delayed with avg delay of 11.49 days, surfacing top delay routes, vehicles, and materials to drive logistics optimization.

Credit Risk Modelling Using Machine Learning | Tech - *Python, Machine Learning* | [Github](#)

- Built a predictive model for credit default risk on 30,000 payment records, applying feature selection, causal analysis of risk drivers, and SMOTE resampling, benchmarked 7 models (Logistic Regression, Decision Trees, Random Forest, SVM, KNN, Naive Bayes), with XGBoost reaching 97.3% accuracy and 0.92 AUC to inform risk exposure decisions.

EDUCATION

Master of Science in Information Management (Data Analytics Track), GPA: 4/4 - University of Illinois Urbana-Champaign

Relevant Coursework: Information Consulting, Data Warehousing and Business Intelligence, Data Mining

Bachelor of Science, Computer Engineering, GPA: 3.7/4 - University of Mumbai

Relevant Coursework: Database Management System, Big Data Analytics, Machine Learning, Artificial Intelligence

CERTIFICATE

Microsoft Power BI Desktop for Business Intelligence
